DETAILED ACTION

This Office Action is in response to an AMENDMENT entered 3/1/2007 for the patent application 10/825,775 filed on 4/15/2004 claiming benefit of 60/479,696 filed 6/18/2003.

Status of Claims

Claims 1-4, 6-16, and 18-69 are pending.

This application is in condition for allowance except for the presence of claims 19-69 directed to inventions non-elected without traverse. Accordingly, claims 19-69 have been cancelled.

Reasons for Allowance

The following is an examiner's statement of reasons for allowance:

The cited prior art taken alone or in combination fails to teach the claimed invention of performing human factors process failure modes and effects analysis for a process. Specifically, claim 1 is directed to receiving input representing at least one task including at least one human activity and described using at least one verb; searching a database for at least two potential human errors resulting from the human activity being related to the at least one verb; transmitting an output representing the at least two potential human errors; receiving an input selecting at least one potential human error for evaluation; transmitting output representing the selected potential human error(s); receiving inputs representing a likelihood of occurrence of the human error; a likelihood of correction of the human error; and a potential severity of an effect of the human error; calculating a risk of potential harm based on the inputs received and transmitting output representing errors for which the calculated risk exceeds a risk threshold; receiving an input representing additional analysis of errors that exceed the risk threshold, and transmitting a human factors process failure modes and effects analysis report.

The closest prior art (Applicant's admitted prior art (**APA**) in pages 2-3 of specification of the instant application, **Sogg** "An Integrated Systems Approach to Human Factors in Commercial Aviation Maintenance Systems", **Eiff** "At-Risk Safety Metric: A Proactive Safety Measurement Strategy", **Bieda** USPGP 2003/0171897) teaches human factors process failure modes and effects analysis.

Art Unit: 2129

Claims 1-4, 6-14, and 18 are considered allowable since when reading the claims in light of the specification, as per MPEP §2111.01 or In re Sneed, 710 F.2d 1544, 1548, 218 USPQ 385, 388 (Fed. Cir. 1983), none of the references of record alone or in combination disclose or suggest the combination of limitations specified in the independent claims including receiving user input selecting potential human errors for evaluation from a bounded list presented by the data processing device (supported at e.g., pg. 10, lines 20-30) and receiving user input to numerically value each of the likelihood of occurrence of the human error, the likelihood of recovery/correction of the human error, and the potential severity of potential harm due to the human error (supported at e.g., pg 11, lines 11-25) as specified in claim 1.

The Examiner was persuaded by the arguments filed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
